

**University of Oklahoma Health Sciences Center
College of Allied Health
Department of Medical Imaging and Radiation Sciences
Goals 2006-2010**

Goals:

1. Provide an in depth and balanced curriculum in clinical and didactic instruction which will provide students with essential knowledge to become competent practitioners, as well as enable the graduates to practice more effectively with other health care practitioners and to assume leadership positions within the profession.
2. Provide didactic and clinical experiences that lead to research and scholarship opportunities in policy development, educational, professional or health care issues.
3. Provide an avenue for students to develop and apply skills in effective communication, analytical and critical thinking and problem-solving necessary for successful professional practice.
4. Provide avenues for involvement in student governance, service to the University, the community, and profession.
5. Provide an academic and clinical environment which leads to the development of clinical skills and competence appropriate to an entry level practitioner and the advanced practitioner.
