

STARS WORKSHOP CRITERIA

Focus on evidence-based practice.

May focus on specific age groups while keeping in mind life span issues related to the topic.

Have an interdisciplinary focus.

Provide follow-up activities and assignments for participants.

Require that participants develop a "back home plan" for sharing applying newly learned skills and sharing information with other members of their team.

Provide "hands on" learning opportunities or have direct applicability to the target population.

Feature instructors who have familiarity with the target audience(s) and how to apply the content to those intervention settings

Provide information that is directed to the learner, not the child or person with a disability.

Provide information that is applicable in least restrictive or natural environments.
